Ordering information

This product, Catalogue No. 93-360-XPB, is published every five years as a standard printed publication at a price of C\$40.00. The following additional shipping charges apply for delivery outside Canada:

	Single issue
United States	C\$6.00
Other countries	C\$10.00

All prices exclude sales taxes.

Ways to order the printed version:

- Telephone (Canada and United States) **1 800 267-6677**
- Fax (Canada and United States) **1 877 287-4369**
- E-mail **order@statcan.ca**
- Mail

Note of Appreciation

*Canada owes the success of its statistical system to
a long-standing partnership between Statistics
Canada, the citizens of Canada, its businesses,
governments and other institutions. Accurate and
timely statistical information could not be produced
without their continued co-operation and goodwill.*

Note de reconnaissance

*Le succès du système statistique du Canada repose
sur un partenariat bien établi entre Statistique
Canada et la population, les entreprises, les
administrations et les autres organismes du Canada.
Sans cette collaboration et cette bonne volonté, il
serait impossible de produire des statistiques
précises et actuelles.*

Highlights

- Canada experienced one of the smallest census-to-census growth rates in its population. Between 1996 and 2001, the nation's population increased by 1,160,333, a gain of 4.0%. The census counted 30,007,094 persons in Canada on May 15, 2001, compared with 28,846,761 in 1996.
- Only three provinces and one territory registered growth rates above the national average of 4.0%. Alberta's population surged by 10.3%, compared with 5.9% between 1991 and 1996. Ontario gained 6.1%, British Columbia, 4.9% and Nunavut, 8.1%.
- Six provinces experienced small changes in population (less than 1.5% in either direction): Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Manitoba and Saskatchewan.
- Nunavut, the newest territory that came into existence in April 1999, had 26,745 residents in 2001, up 8.1% from the number of persons living within its boundaries at the time of the 1996 Census.
- The population of Newfoundland and Labrador declined for the second consecutive census period. Between 1996 and 2001, the province's population decreased 7.0%, more than double the 2.9% rate of decline of the previous five-year period. The Yukon Territory and the Northwest Territories also showed declines of more than 5.0%.
- The trend in urbanization continued. In 2001, 79.4% of Canada's population lived in a census metropolitan area or census agglomeration, compared with 78.5% in 1996.
- Seven of 27 census metropolitan areas had a growth rate at least double that of the national average of 4.0%; the largest growth rates were in Calgary, Oshawa and Toronto.
- The fastest growing census subdivisions (municipalities) with a population of 5,000 or more were three municipalities in Alberta: Cochrane, whose population surged 58.9% to 11,798; Sylvan Lake, where the population rose 44.5% to 7,493; and Strathmore, whose population increased 43.4% to 7,621.

Faits saillants

- Le Canada a enregistré l'un des plus faibles taux de croissance démographique observés au cours d'une période intercensitaire. De 1996 à 2001, la population du pays a augmenté de 1 160 333 personnes, soit une hausse de 4,0 %. Le 15 mai 2001, le recensement a dénombré 30 007 094 personnes, par comparaison à 28 846 761 lors du recensement de 1996.
- Seuls trois provinces et un territoire ont présenté un taux de croissance supérieur à la moyenne nationale de 4,0 %. La population de l'Alberta a grimpé en flèche, affichant un taux de 10,3 %, comparativement à 5,9 % pour la période allant de 1991 à 1996. L'Ontario a vu sa population s'accroître de 6,1 %, la Colombie-Britannique, de 4,9 %, et le Nunavut, de 8,1 %.
- La population a peu varié dans six provinces : l'Île-du-Prince-Édouard, la Nouvelle-Écosse, le Nouveau-Brunswick, le Québec, le Manitoba et la Saskatchewan ont enregistré des taux compris entre -1,5 % et +1,5 %.
- Le Nunavut, nouvellement créé en avril 1999, comptait 26 745 personnes en 2001, soit 8,1 % de plus que le nombre de personnes vivant à l'intérieur des mêmes frontières au moment du recensement de 1996.
- La population de Terre-Neuve-et-Labrador a pour sa part diminué pour une deuxième période intercensitaire de suite. De 1996 à 2001, la population de la province a chuté de 7,0 %, une baisse équivalant à plus du double du taux enregistré pour les cinq années précédentes (2,9 %). Le Yukon et les Territoires du Nord-Ouest ont aussi vu leur population diminuer de plus de 5,0 %.
- La tendance en matière d'urbanisation s'est poursuivie. En 2001, 79,4 % de la population du Canada vivait dans une région métropolitaine de recensement ou une agglomération de recensement, comparativement à 78,5 % en 1996.
- Dans 7 des 27 régions métropolitaines de recensement, le taux de croissance équivalait à deux fois ou plus celui de la moyenne nationale de 4,0 %. Calgary, Oshawa et Toronto ont connu les taux de croissance les plus élevés.
- Les trois subdivisions de recensement (municipalités) de 5 000 habitants ou plus ayant connu la croissance la plus rapide se trouvaient en Alberta : Cochrane, dont la population a augmenté de 58,9 % pour atteindre 11 798 habitants; Sylvan Lake, où la croissance s'est chiffrée à 44,5 % pour une population de 7 493 habitants; et Strathmore, où la population a crû de 43,4 % pour atteindre 7 621 habitants.

- Of the census subdivisions (municipalities) with a population of 100,000 or more, Vaughan, Ontario, led the way with a gain of 37.3% to 182,022 persons.
- Parmi les subdivisions de recensement (municipalités) de 100 000 habitants ou plus, celle de Vaughan en Ontario menait avec une hausse de 37,3 %, soit 182 022 habitants.

Introduction

The 2001 Census, Canada's 19th census, is the first Census of Population for the new century. Statistics Canada would like to thank the millions of people across the country who have made this publication and future census products possible.

This publication provides population and dwelling counts established by the 2001 Census of Canada. The levels of geography covered are as follows: provinces and territories, census divisions, census subdivisions, designated places, census metropolitan areas and census agglomerations, federal electoral districts (according to the 1996 Representation Order), and urban and rural areas. The geographic boundaries of these areas are those that were in effect on January 1, 2001 (the geographic reference date for the 2001 Census of Canada).

As well, there are two maps to show the spatial distribution of the population as established by the census.

The information that is found in this publication, and a variety of other geographic reference items are also available on the Internet at www.statcan.ca.

An interactive reference mapping tool called GeoSearch is available on the Statistics Canada Internet site for identifying places and geographic units presented in this publication. Users of this publication may also be interested in consulting the following reference map series:

- reference maps of census divisions and census subdivisions by province or territory (Catalogue Nos. 92F0149XIB, 92F0149XCB, 92F0149XPB);
- reference maps of census tracts by census metropolitan areas and tracted census agglomerations (Catalogue Nos. 92F0145XIB, 92F0145XCB, 92F0145XPB);
- reference maps of dissemination areas by census tracts for census metropolitan areas and tracted census agglomerations (Catalogue Nos. 92F0146XIB, 92F0146XCB, 92F0146XPB);
- reference maps of dissemination areas by non-tracted census agglomerations (Catalogue Nos. 92F0147XIB, 92F0147XCB, 92F0147XPB);

Introduction

Le recensement de 2001, qui représente le 19^e recensement du Canada, est le premier recensement de la population du nouveau millénaire. Statistique Canada profite de l'occasion pour remercier les millions de personnes de partout au pays sans le concours desquelles la diffusion de la présente publication et des autres produits du recensement serait impossible.

La présente publication donne les chiffres de population et des logements déterminés dans le cadre du recensement du Canada de 2001. Les régions géographiques couvertes sont : les provinces et territoires, les divisions de recensement, les subdivisions de recensement, les localités désignées, les régions métropolitaines de recensement et les agglomérations de recensement, les circonscriptions électorales fédérales (Ordonnance de représentation de 1996) ainsi que les régions urbaines et les régions rurales. Les limites géographiques de ces régions sont celles qui étaient en vigueur le 1^{er} janvier 2001 (date de référence géographique pour le recensement du Canada de 2001).

La publication comporte également deux cartes qui illustrent la répartition spatiale de la population selon le recensement.

Les renseignements fournis dans la présente publication ainsi que divers autres produits de référence géographique peuvent aussi être consultés sur Internet, à l'adresse www.statcan.ca.

Le site Web de Statistique Canada comporte un outil de recherche cartographique interactive appelé GéoRecherche, qui permet de repérer les localités et les unités géographiques sur lesquelles porte la présente publication. Par ailleurs, le lecteur trouvera sans doute utile de se reporter aux cartes de référence suivantes :

- Cartes de référence des divisions de recensement et des subdivisions de recensement selon la province ou le territoire (nos 92F0149XIB, 92F0149XCB, 92F0149XPB au catalogue);
- Cartes de référence des secteurs de recensement pour les régions métropolitaines de recensement et les agglomérations de recensement subdivisées en secteurs de recensement (nos 92F0145XIB, 92F0145XCB, 92F0145XPB au catalogue);
- Cartes de référence des aires de diffusion par secteurs de recensement pour les régions métropolitaines de recensement et les agglomérations de recensement subdivisées en secteurs de recensement (nos 92F0146XIB, 92F0146XCB, 92F0146XPB au catalogue);
- Cartes de référence des aires de diffusion pour les agglomérations de recensement non subdivisées en secteurs de recensement (nos 92F0147XIB, 92F0147XCB, 92F0147XPB au catalogue);

- reference maps of dissemination areas by census divisions for the areas outside census metropolitan areas and census agglomerations (Catalogue Nos. 92F0148XIB, 92F0148XCB, 92F0148XPB).

Organization of the Publication

The publication begins with two thematic maps, one showing the population density of the Canadian population as determined by the 2001 Census, and one showing the census population change since 1996. At the core of the publication is a series of 11 tables. Table 1 includes population and dwelling counts for all of the provinces and territories. Tables 2 through 4 present population and dwelling counts for census metropolitan areas and census agglomerations and their component census subdivisions (municipalities). Table 5 shows population and dwelling counts for census divisions, census subdivisions (municipalities) and designated places. Table 6 displays population counts for census metropolitan areas, and census agglomerations by urban core, urban fringe, rural fringe, and urban areas. Tables 7 and 8 present data for urban areas. Table 9 presents population and dwelling counts according to the Statistical Area Classification. Table 10 shows urban and rural data, and Table 11 displays population and dwelling counts for federal electoral districts (according to the 1996 Representation Order). This is followed by an index of the census subdivisions. The index includes a reference to the page number in Table 5 for the corresponding data. Other information such as a geographic hierarchy and definitions of terms, and further explanations regarding the quality of the data can be found in the reference material at the end of the publication.

Content Description

Map 1 displays the population density of Canada based on 2001 Census data.

Map 2 displays the percentage population change from the 1996 to the 2001 Census at the census division level (for example, county and "municipalité régionale de comté").

Table 1 presents the 2001 and 1996 population counts and the 2001 total private dwelling counts for Canada, provinces and territories. It also displays the percentage change in the population between 1996 and 2001.

- Cartes de référence des aires de diffusion selon la division de recensement pour les régions à l'extérieur des régions métropolitaines de recensement et des agglomérations de recensement (n^{os} 92F0148XIB, 92F0148XCB, 92F0148XPB au catalogue).

Structure de la publication

La publication s'ouvre sur deux cartes thématiques illustrant respectivement la densité de la population canadienne selon le recensement de 2001 et la variation de la population enregistrée depuis 1996. Le cœur de la publication est constitué par une série de 11 tableaux. Le tableau 1 donne les chiffres de population et des logements pour toutes les provinces et tous les territoires. Les tableaux 2 à 4 présentent les chiffres de population et des logements pour les régions métropolitaines de recensement, les agglomérations de recensement et les subdivisions de recensement (municipalités) qui en font partie. Le tableau 5 présente les chiffres de population et des logements pour les divisions de recensement, les subdivisions de recensement (municipalités) et les localités désignées. Le tableau 6 fait état des chiffres de population pour les régions métropolitaines de recensement et les agglomérations de recensement selon le noyau urbain, la banlieue urbaine, la banlieue rurale et les régions urbaines. Les tableaux 7 et 8 fournissent les données pour les régions urbaines. Le tableau 9 présente les chiffres de population et des logements selon la Classification des secteurs statistiques. Le tableau 10 présente les données selon les régions urbaines et rurales, tandis que le tableau 11 présente les chiffres de population et des logements pour les circonscriptions électorales fédérales (Ordonnance de représentation de 1996). Ces tableaux sont suivis d'un index des subdivisions de recensement qui comporte un renvoi à la page du tableau 5 dans laquelle figurent les données correspondantes. Enfin, le lecteur trouvera dans la documentation de référence à la fin de la publication la hiérarchie des unités géographiques, un glossaire ainsi que des renseignements plus détaillés sur la qualité des données.

Description du contenu

La **carte 1** indique la densité de la population du Canada selon le recensement de 2001.

La **carte 2** illustre la variation en pourcentage de la population de 1996 à 2001 à l'échelle de la division de recensement (par exemple, comté et municipalité régionale de comté).

Le **tableau 1** présente les chiffres de population de 2001 et de 1996 et le nombre total de logements privés de 2001 pour le Canada, les provinces et les territoires. Il indique également la variation en pourcentage de la population entre 1996 et 2001.

Table 2 shows, in alphabetical order, the 2001 and 1996 population counts and the 2001 total private dwelling counts for census metropolitan areas and census agglomerations. It also presents the percentage change in the population between 1996 and 2001.

Table 3 presents the 2001 population counts, land area and population density for census metropolitan areas and census agglomerations. It also displays the 2001 and 1996 national population ranking of the census metropolitan areas and census agglomerations. In addition, the table presents, at the provincial and territorial level, the 2001 population ranking for census metropolitan areas and census agglomerations.

Table 4 presents the 2001 and 1996 population counts and the 2001 total private dwelling counts for census metropolitan areas and census agglomerations, with their component census subdivisions (municipalities). It also shows the land area and population density.

Table 5 presents the 2001 and 1996 population counts and the 2001 total private dwelling counts for census divisions, census subdivisions (municipalities), and designated places. It also presents the land area, population density, and the census divisions and census subdivisions population ranking at both the national and provincial/territorial level for 2001.

Table 6 shows the 2001 population counts for census metropolitan areas, census agglomerations, and their urban core, urban fringe, and rural fringe population.

Table 7 presents the 2001 population and total private dwelling counts for urban areas. It also shows the national and provincial/territorial population ranking of urban areas for 2001.

Table 8 shows the 2001 population counts for urban areas in alphabetical order, with their component census subdivisions (municipalities).

Table 9 presents the 2001 population and total private dwelling counts for Canada, provinces and territories, summed for the seven components of the Statistical Area Classification (SAC). These SAC components include: all census metropolitan areas (CMAs); all census agglomerations (CAs); each of the four categories (strongly influenced, moderately influenced, weakly influenced, and not influenced) of the CMA and CA influenced zones (MIZ) within the 10 provinces; and all the territories (all of Nunavut, Northwest Territories and Yukon Territory, minus the data for CAs located in these territories).

Le tableau 2 présente les chiffres de population de 2001 et de 1996 et le nombre total de logements privés de 2001 pour les régions métropolitaines de recensement et les agglomérations de recensement classées par ordre alphabétique. Il indique également la variation en pourcentage de la population entre 1996 et 2001.

Le tableau 3 présente les chiffres de population, la superficie des terres et la densité de la population de 2001 pour les régions métropolitaines de recensement et les agglomérations de recensement, ainsi que le classement national selon la population de 2001 et de 1996 des régions métropolitaines de recensement et des agglomérations de recensement. Il montre également le classement des régions métropolitaines de recensement et des agglomérations de recensement selon la population de 2001, dans la province ou le territoire.

Le tableau 4 présente les chiffres de population de 2001 et de 1996 et le nombre total de logements privés de 2001 pour les régions métropolitaines de recensement, les agglomérations de recensement et les subdivisions de recensement (municipalités) qui en font partie. Il indique aussi la superficie des terres et la densité de la population.

Le tableau 5 présente les chiffres de population de 2001 et de 1996 et le nombre total de logements privés de 2001 pour les divisions de recensement, les subdivisions de recensement (municipalités) et les localités désignées. Il indique aussi la superficie des terres, la densité de la population et le classement des divisions de recensement et des subdivisions de recensement selon la population de 2001, au Canada et dans la province ou le territoire.

Le tableau 6 présente les chiffres de population de 2001 pour les régions métropolitaines de recensement, les agglomérations de recensement et leur noyau urbain, leur banlieue urbaine et leur banlieue rurale.

Le tableau 7 présente les chiffres de population et le nombre total de logements privés de 2001 pour les régions urbaines. Il indique également le classement des régions urbaines selon la population de 2001, au Canada et dans la province ou le territoire.

Le tableau 8 présente les chiffres de population de 2001 pour les régions urbaines classées par ordre alphabétique, ainsi que pour les subdivisions de recensement (municipalités) qui en font partie.

Le tableau 9 présente les chiffres de population et le nombre total de logements privés de 2001 pour le Canada, les provinces et les territoires, totalisés pour les sept éléments de la Classification des secteurs statistiques (CSS). La CSS regroupe toutes les régions métropolitaines de recensement (RMR), toutes les agglomérations de recensement (AR) et les zones d'influence des RMR et des AR (ZIM) des quatre catégories définies (influence forte, modérée, faible et sans influence) au sein des dix provinces et tous les territoires (la totalité du Nunavut, des Territoires du Nord-Ouest et du Yukon, moins les AR situées dans ces territoires).

Table 10 shows the 2001 urban and rural population counts of census divisions and census subdivisions (municipalities).

Table 11 presents the 2001 and 1996 population counts and 2001 total private dwelling counts for federal electoral districts (according to the 1996 Representation Order). It also shows the percentage change in the population between 1996 and 2001.

An alphabetical index of the census subdivisions (municipalities) follows. It includes, where applicable, the census metropolitan area or census agglomeration where the census subdivision is located. There is also a reference to the corresponding page in Table 5 of this publication that contains data for the census subdivision (municipality).

A figure in the reference material illustrates the hierarchy of standard geographic areas for the 2001 Census.

Content Considerations

The 2001 Census population counts for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians who were staying in that area on Census Day and who had no usual place of residence elsewhere in Canada, as well as those considered to be "non-permanent residents" (see the Special Notes, page 347). For most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in that area at any particular time could significantly exceed the number of usual residents shown here. The population counts include Canadians living in other countries, but do not include foreign residents living in Canada (the "foreign residents" category does not include "non-permanent residents" – see the Special Notes, page 347). Given these differences, users are advised not to interpret population counts as being the number of people living in the reported dwellings.

The dwelling counts refer to total private dwellings in Canada, including dwellings occupied by their usual residents, and/or occupied by temporary or foreign residents as well as private dwellings that are unoccupied. An unoccupied dwelling is a private dwelling that meets the two conditions

Le **tableau 10** présente les chiffres de population de 2001 pour les régions urbaines et les régions rurales des divisions de recensement et des subdivisions de recensement (municipalités).

Le **tableau 11** présente les chiffres de population de 2001 et de 1996 et le nombre total de logements privés de 2001 pour les circonscriptions électorales fédérales (Ordonnance de représentation de 1996). Il indique également la variation en pourcentage de la population entre 1996 et 2001.

Les tableaux sont suivis d'un index alphabétique des subdivisions de recensement (municipalités) qui indique, s'il y a lieu, la région métropolitaine de recensement ou l'agglomération de recensement dont fait partie la subdivision de recensement. L'index renvoie également à la page du tableau 5 de la présente publication dans laquelle sont présentées les données relatives à la subdivision de recensement (municipalité).

On trouve dans la documentation de référence une figure qui illustre la hiérarchie des unités géographiques normalisées du recensement de 2001.

Considérations relatives au contenu

Les chiffres de population du recensement de 2001 pour une région particulière représentent le nombre de Canadiens dont le domicile habituel est dans cette région, quel que soit l'endroit où ils se trouvent le jour du recensement. Sont également compris dans ces chiffres tous les Canadiens qui demeurent dans un logement de cette région le jour du recensement qui n'ont pas de domicile habituel ailleurs au Canada, de même que ceux qui sont considérés comme des « résidents non permanents » (voir les notes spéciales, à la page 366). Dans la plupart des régions, la différence entre le nombre de résidents habituels et le nombre de résidents qui demeurent dans cette région le jour du recensement est minime. Toutefois, à certains endroits, notamment dans des régions touristiques ou de villégiature, ou dans celles où l'on trouve d'importants camps de travail, le nombre de personnes qui demeurent dans la région à n'importe quel moment pourrait être bien supérieur au nombre de résidents habituels dont il est fait mention dans la présente publication. Les chiffres de population tiennent compte des Canadiens qui habitent dans d'autres pays, mais non pas des résidents étrangers qui habitent au Canada (la catégorie des « résidents étrangers » ne comprend pas les « résidents non permanents » [voir les notes spéciales, à la page 366]). Compte tenu de ces divergences, les utilisateurs ne doivent pas déduire que les chiffres de population correspondent au nombre de personnes qui habitent dans les logements déclarés.

Les chiffres des logements correspondent à l'ensemble des logements privés au Canada, y compris les logements occupés par les résidents habituels, et/ou occupés par des résidents temporaires ou étrangers, de même que les logements privés inoccupés. Un logement inoccupé est un

necessary for year-round occupancy (a source of heat or power and shelter from the elements), but in which no usual, temporary or foreign resident is living on Census Day. The census dwelling counts do not include collective dwellings, which are dwellings of a commercial, institutional or communal nature. The usual residents counted in collective dwellings are, however, included in the population counts.

Care should be exercised in comparing the 2001 Census counts of total dwellings (including both occupied and unoccupied) with dwelling counts from the 1996 and earlier population and dwelling count releases. For 2001, the count of total dwellings in some areas is substantially higher than reported for the 1996 Census of Canada. The increase in the total number of dwellings between 1996 and 2001 is directly linked to our efforts to improve the coverage of seasonal dwellings. Based on our consultation process for 2001 and the requirements to simplify collection procedures and improve overall coverage of dwellings, the 2001 Census private dwelling definition was modified slightly from previous censuses to eliminate one criterion – access to a source of drinking water throughout the year. The result was that more private dwellings were counted in the 2001 Census – specifically more seasonal dwellings (secondary residences such as cottages, cabins and/or chalets) that now meet the private dwelling definition.

For the 2001 Census, a private dwelling is defined as:

A set of living quarters designed for or converted for human habitation in which a person or group of persons reside or could reside. In addition, a private dwelling must have a source of heat or power and must be an enclosed space that provides shelter from the elements, as evidenced by complete and enclosed walls and roof and by doors and windows that provide protection from wind, rain and snow.

Changes occur to the names, boundaries, and other characteristics of geographic areas (e.g. census subdivisions may amalgamate, or there may be an annexation or a change of name or status). Since the geographic framework is used for census data collection, the geographic reference date must be set several months before the date of the census in order to have these changes made in time. For the 2001 Census, the geographic reference date was January 1, 2001.

Users wishing to compare 2001 Census data with those of other censuses should then take into account that the boundaries of geographic areas may change from one

logement privé qui répond aux deux conditions essentielles à l'habitation permanente (être doté d'une source de chauffage ou d'énergie et offrir un abri permanent contre les intempéries), mais que personne (résident habituel, temporaire ou étranger) n'habitait le jour du recensement. Les chiffres des logements du recensement ne comprennent pas les logements collectifs, qui sont des établissements commerciaux, institutionnels ou communautaires. Les résidents habituels dénombrés dans des logements collectifs sont toutefois inclus dans les chiffres de population.

Il importe de faire preuve de circonspection lorsqu'on compare les chiffres totaux des logements (occupés et inoccupés) du recensement de 2001 avec les chiffres des logements de 1996 et les chiffres de population et des logements diffusés précédemment. Le nombre total de logements dénombrés dans certaines régions en 2001 est beaucoup plus élevé que celui diffusé au recensement du Canada de 1996. Cette augmentation du nombre total de logements entre 1996 et 2001 est directement liée aux mesures que nous avons prises pour améliorer la couverture des logements saisonniers. À la lumière des résultats du processus de consultation pour le recensement de 2001 et afin de simplifier les procédures de collecte et d'améliorer la couverture globale des logements, nous avons modifié légèrement la définition de logement privé afin d'éliminer un critère, soit celui de l'accès en permanence à une source d'eau potable. Par conséquent, un plus grand nombre de logements privés ont été dénombrés au recensement de 2001, plus particulièrement des logements saisonniers (résidences secondaires comme des chalets ou des maisonnettes pour touristes) qui répondent maintenant à la définition de logement privé.

Pour le recensement de 2001, un logement privé se définit par :

Un ensemble de pièces d'habitation conçues ou transformées qu'occupent ou pourraient occuper une personne ou un groupe de personnes. De plus, un logement privé doit être doté d'une source de chauffage ou d'énergie et doit fournir un espace clos permettant de s'abriter des intempéries, comme en atteste la présence de murs d'enceinte et d'un toit ainsi que de portes et fenêtres offrant une protection contre le vent, la pluie et la neige.

Des modifications sont apportées aux noms, limites et autres caractéristiques des régions géographiques (p. ex. des subdivisions de recensement peuvent fusionner ou il peut y avoir une annexion ou un changement de nom ou de genre). Étant donné que le cadre géographique est utilisé aux fins de la collecte des données du recensement, la date de référence géographique doit être fixée plusieurs mois avant la date du recensement pour que ces modifications puissent être apportées à temps. Pour le recensement de 2001, la date de référence géographique était le 1^{er} janvier 2001.

Les utilisateurs qui souhaitent établir des comparaisons entre les données du recensement de 2001 et celles des autres recensements doivent tenir compte du fait que les limites

census to another. In order to facilitate comparison, the 1996 Census population counts are adjusted as needed to take into account boundary changes between the 1996 and 2001 Censuses. The 1996 counts that were adjusted are identified by the letter "A". The letter "A" may also refer to corrections to the 1996 counts; however, most of these are the result of boundary changes. This symbol is also used to identify areas that have been created since 1996, such as newly incorporated municipalities (census subdivisions) and new designated places (DPLs). When the letter "A" appears next to a designated place with parts, this means that one or more of the parts has an adjusted count.

There are 1,261 designated places for the 2001 Census. There are 602 census subdivisions that contain DPLs or parts of DPLs (82 DPLs straddle two or more census subdivisions). For DPLs that contain parts, the number of parts is displayed beside the DPL name (e.g. part of – partie de 2).

A detailed description of intercensal changes made to the geographic units can be found in the publication entitled *Standard Geographical Classification, 2001, Volume I* (Catalogue No. 12-571-XPB).

Some Indian settlements and Indian reserves were incompletely enumerated during the 1996 Census and/or the 2001 Census (see Special Notes, page 347). These reserves and settlements are identified wherever they appear in the publication.

Land area is the area in square kilometres of the land-based portions of standard geographic areas. The land area measurements are unofficial, and are provided for the sole purpose of calculating population density. The population density was calculated, using land area at four decimal places. The land area presented in these tables is rounded off to two decimal places. The data are calculated and stored in square kilometres at the block level, and then aggregated to the higher level geographic units. Land area data for the standard geographic areas reflect the boundaries in effect on January 1, 2001 (the geographic reference date for the 2001 Census of Canada). Users should note that even when the boundaries of standard geographic areas did not change between the 1996 and 2001 Censuses, the land areas differ because the methodology for calculating land area has changed. Land area for 1996 was manually calculated using a planimeter, and for 2001, it is calculated using software applied to the new National Geographic Base. Users should also note that the land area for each geographic unit is an independent aggregation from the block level. Consequently,

des régions géographiques peuvent changer d'un recensement à l'autre. Pour faciliter les comparaisons, les chiffres de population du recensement de 1996 sont ajustés au besoin pour refléter les modifications apportées aux limites dans l'intervalle séparant les recensements de 1996 et de 2001. Les chiffres de 1996 qui ont été ajustés sont marqués de la lettre « A ». La mention « A » peut également signaler des corrections aux chiffres de 1996; celles-ci découlent cependant, dans la majeure partie des cas, de modifications aux limites. Ce symbole est aussi utilisé pour identifier les régions qui ont été créées depuis 1996, telles que les municipalités (subdivisions de recensement) nouvellement constituées et les nouvelles localités désignées (LD). Lorsque la lettre « A » apparaît à côté du nom d'une localité désignée renfermant des parties, les chiffres d'une ou de plusieurs de ces parties ont été ajustés.

On compte 1 261 localités désignées pour le recensement de 2001. Il y a 602 subdivisions de recensement qui renferment des LD ou des parties de LD (82 LD chevauchent les limites de deux ou plusieurs subdivisions de recensement). On trouve le nombre de parties à côté du nom de la localité désignée lorsque celle-ci en renferme (p. ex. part of – partie de 2).

Vous trouverez dans la publication intitulée *Classification géographique type de 2001, volume I* (n° 12-571-XPB au catalogue), une description détaillée des modifications intercensitaires apportées aux unités géographiques.

Certains établissements indiens et certaines réserves indiennes ont fait l'objet d'un dénombrement incomplet pendant le recensement de 1996 et/ou celui de 2001 (voir les notes spéciales, à la page 366). Cela est signalé à l'endroit où il est question de ces réserves ou de ces établissements dans la publication.

La superficie des terres correspond à la surface en kilomètres carrés des parties des terres des régions géographiques du recensement. Les données sur les superficies des terres ne sont pas officielles et servent uniquement à calculer la densité de la population. Cette densité a été calculée à l'aide de superficies exprimées par un nombre à quatre décimales. La superficie présentée dans ces tableaux est arrondie au plus près à deux décimales. Les données sont calculées et enregistrées en kilomètres carrés à l'échelle de l'îlot, puis elles sont agrégées afin d'obtenir la superficie des terres des unités géographiques de niveau supérieur. Les superficies des terres sont calculées d'après les limites des régions géographiques du recensement en vigueur le 1^{er} janvier 2001 (date de référence géographique du recensement du Canada de 2001). Il importe de noter que même lorsque les limites des régions géographiques normalisées n'ont pas été modifiées dans l'intervalle entre les recensements de 1996 et de 2001, les superficies des terres ne correspondent pas parce qu'elles ont été calculées à l'aide de méthodes différentes. Pour les besoins du

if users aggregate land areas differently – such as aggregating municipality (census subdivision) land areas to the provincial level, they may get results with minor differences from the values presented.

recensement de 1996, la superficie des terres a été calculée manuellement à l'aide d'un planimètre, alors que pour ceux du recensement de 2001, elle est calculée à l'aide d'un logiciel exécuté sur la nouvelle Base géographique nationale. Les utilisateurs doivent savoir aussi que la superficie de chaque unité géographique est calculée séparément par agrégation des superficies correspondant aux îlots. Par conséquent, s'ils calculent les superficies de façon différente (par exemple en agrégeant les superficies des municipalités [subdivisions de recensement] pour obtenir la superficie d'une province), ils pourraient obtenir des résultats légèrement différents des valeurs indiquées.

Hierarchy of Standard Geographic Units for Dissemination, 2001 Census

¹ Census agricultural regions in Saskatchewan are composed of census consolidated subdivisions.

² Economic regions in Ontario are composed of municipalities (census subdivisions).

³ One CMA and four CAs cross provincial boundaries.

⁴ Five UAs cross provincial boundaries.

⁵ Designated places do not cover the total area of CSDs. Eighty-two DPLs cross CSD boundaries, of which 13 also cross CD boundaries.

⁶ Census metropolitan area and census agglomeration influenced zones (MIZ), dissemination area, block, and locality are new concepts for the 2001 Census.

⁷ The Statistical Area Classification (SAC) is a new geographic classification that allocates each CSD according to whether it is a component of a CMA, CA, a census metropolitan area and census agglomeration influenced zone (MIZ), or the territories outside the CAs of Whitehorse and Yellowknife.

⁸ For the 2001 Census only, a best fit linkage is created between the 1996 CSDs and 2001 blocks to facilitate historical data retrieval.

Definitions

The definitions of geographic terms and census concepts are presented here in a summary form only. Users should refer to the 2001 Census Dictionary (Catalogue Nos. 92-378-XIE or 92-378-XPE) for the full definitions and additional remarks related to these concepts and definitions.

Census Division (CD)

Census division (CD) is the general term for provincially legislated areas (such as county, municipalité régionale de comté and regional district) or their equivalents. Census divisions are intermediate geographic areas between the province level and the municipality (census subdivision).

Census divisions have been established in provincial law to facilitate regional planning, as well as the provision of services that can be more effectively delivered on a scale larger than a municipality. In Newfoundland and Labrador, Manitoba, Saskatchewan, Alberta, Yukon Territory, Northwest Territories and Nunavut, provincial/territorial law does not provide for these administrative geographic areas. Therefore, Statistics Canada, in cooperation with these provinces and territories, has created equivalent areas called census divisions for the purpose of disseminating statistical data. In the Yukon Territory, the census division is equivalent to the entire territory.

Census Metropolitan Area (CMA) and Census Agglomeration (CA)

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data.

If the population of the urban core of a CA declines below 10,000, the CA is retired. However, once an area becomes a CMA, it is retained as a CMA even if the population of its urban core declines below 100,000. The urban areas in the CMA or CA that are not contiguous to the urban core are called the urban fringe. Rural areas in the CMA or CA are called the rural fringe.

When a CA has an urban core of at least 50,000 based on census counts, it is subdivided into census tracts. Census tracts are maintained for the CA even if the population of the urban core subsequently falls below 50,000. All CMAs are subdivided into census tracts.

Census Metropolitan Area and Census Agglomeration Influenced Zones (MIZ)

The census metropolitan area and census agglomeration influenced zone (MIZ) is a concept that geographically differentiates the area of Canada outside census metropolitan areas (CMAs) and census agglomerations (CAs). Census subdivisions outside CMAs and CAs are assigned to one of four categories according to the degree of influence (strong, moderate, weak or no influence) that the CMAs and/or CAs have on them.

Census subdivisions (CSDs) are assigned to a MIZ category based on the percentage of their resident employed labour force that has a place of work in the urban core(s) of CMAs or CAs. CSDs with the same degree of influence tend to be clustered. They form zones around CMAs and CAs that progress through the categories from "strong" to "no" influence as distance from the CMAs and CAs increases.

The MIZ is a new concept applied, for statistical analysis purposes, to CSDs outside CMAs and CAs. Previously all CSDs in Canada were either a component of a CMA or CA or not (outside CMAs and CAs). The MIZ provides users with a more detailed geographic identity for the CSDs outside CMAs and CAs. As with CMAs and CAs, the allocation of a CSD to a MIZ category was determined using commuting flows of the employed labour force derived from the 1991 Census place of work data.

The calculation of the commuting flows for MIZ differs somewhat from the calculation used for CSD inclusion in CMAs/CAs. The percentages of the employed labour force living in a particular CSD outside CMAs and CAs and working in the urban core of any CMA/CA are combined to determine the degree of influence that one or more CMAs/CAs have on that CSD, as follows:

1. The strong MIZ category includes CSDs with a commuting flow of 30% or more (at least 30% of the total employed labour force living in the CSD works in any CMA/CA urban core).
2. The moderate MIZ category includes CSDs with a commuting flow percentage between 5% and 30% (at least 5%, but less than 30% of the total employed labour force living in the municipality works in any CMA/CA urban core).
3. The weak MIZ category includes CSDs with a commuting flow percentage more than 0%, but less than 5% (more than 0%, but less than 5% of the total employed labour force living in the municipality works in any CMA/CA urban core).
4. The No MIZ category includes those CSDs with either fewer than 40 people in the resident labour force (where data suppression rules apply) or no people commuting to work in CMA/CA urban cores.

Care should be exercised if applying the MIZ concept in Nunavut, the Northwest Territories or the Yukon Territory. This is because many CSDs in these territories are very large and sparsely populated, which contributes to instability in the place of work-population relationship upon which the MIZ is constructed.

Census Subdivision (CSD)

Census subdivision (CSD) is the general term for municipalities (as determined by provincial legislation) or areas treated as municipal equivalents for statistical purposes (for example, Indian reserves, Indian settlements and unorganized territories).

Census Subdivision Type

Census subdivisions (CSDs) are classified into 46 types according to official designations adopted by provincial or federal authorities. Two exceptions are "Subdivision of Unorganized" in Newfoundland and Labrador, and "Subdivision of County Municipality" in Nova Scotia, which are geographic areas created as equivalents for municipalities by Statistics Canada, in cooperation with those provinces, for the purpose of disseminating statistical data.

The census subdivision type accompanies the census subdivision name in order to distinguish CSDs from each other.

C	City – Cité
CC	Chartered Community

VN	Village nordique

Designated Place (DPL)

A designated place is normally a small community or settlement that does not meet the criteria established by Statistics Canada to be a census subdivision (an area with municipal status) or an urban area.

Designated places are created by provinces and territories, in cooperation with Statistics Canada, to provide data for submunicipal areas.

Designated Place Type

DPL	Designated Place
CFA	Class IV Area
LSD	Local Service District
MDI	Municipalité dissoute
DMU	Dissolved Municipality
LSB	Local Service Board
NCM	Northern Community
OHM	Organized Hamlet
UNP	Unincorporated Place
MET	Métis Settlement
IST	Island Trust
SE	Aboriginal Settlement

Dissemination Area (DA)

The dissemination area (DA) is a small, relatively stable geographic unit composed of one or more blocks. It is the smallest standard geographic area for which all census data are disseminated. DAs cover all the territory of Canada.

Federal Electoral District (FED)

A federal electoral district is an area represented by a member of the House of Commons. The federal electoral district boundaries used for the 2001 Census are based on the 1996 Representation Order.

Following the release of population counts from each decennial census, the Chief Electoral Officer determines the number of seats in the House of Commons and publishes the information in the Canada Gazette. Electoral boundaries commissions then determine the adjustments to the constituency boundaries. Based on reports from these commissions, the Chief Electoral Officer prepares a representation order (RO) that describes the boundaries and specifies the name and the population of each federal electoral district (FED). The representation order is in force on the first dissolution of Parliament that occurs at least one year after its proclamation. The 1996 Representation Order (proclaimed on January 8, 1996) was based on 1991 Census population counts, and increased the number of FEDs to 301, up from 295 for the previous 1987 Representation Order. (Only 31 FEDs described in the 1996 RO had the same

boundaries as the FEDs in the 1987 RO.) The names of FEDs may change at any time through an Act of Parliament.

The FED boundaries and names used for the 2001 Census reflect those in effect on January 1, 2001 (the geographic reference date for the 2001 Census of Canada).

Geographic Reference Date

The geographic reference date is a date determined by Statistics Canada for the purpose of finalizing the geographic framework for which census data will be collected, tabulated and reported. For the 2001 Census, the geographic reference date is January 1, 2001.

Land Area

Land area is the area in square kilometres of the land-based portions of standard geographic areas.

The land area measurements are unofficial, and are provided for the sole purpose of calculating population density.

Land area data for the standard geographic areas reflect the boundaries in effect on January 1, 2001 (the geographic reference date for the 2001 Census of Canada). The data are available for all standard geographic areas.

The data are derived from the National Geographic Base (NGB), including selected water polygon layers. The NGB's Lambert Conformal Conic projection is transformed to the Albers Equal-area Conic projection, since the property of equal area is indispensable for calculating land area. Separate projection parameters (two standard parallels, central meridian and latitude of projection origin) are used for each province/territory, since greater accuracy is achieved by this approach. Land area is calculated using the Arc/Info® GIS software. The data are calculated and stored in square kilometres at the block level, and then aggregated to the higher level geographic units.

Users should note that even when the boundaries of standard geographic areas did not change between the 1996 and 2001 Censuses, the land areas differ because the methodology for calculating land area changed. Land area for 1996 was manually calculated using a planimeter, and for 2001, it is calculated using software applied to the new National Geographic Base.

Population Density

Population density is the number of persons per square kilometre.

Private Dwelling

Refers to a separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or staircase inside the building. The entrance to the

dwelling must be one that can be used without passing through the living quarters of someone else. The dwelling must meet the two conditions necessary for year-round occupancy:

(a) a source of heat or power (as evidenced by chimneys, power lines, oil or gas pipes or meters, generators, woodpiles, electric lights, heating pumps, solar heating panels, etc.);

(b) an enclosed space that provides shelter from the elements (as evidenced by complete and enclosed walls and roof, and by doors and windows that provide protection from wind, rain and snow).

The census classifies private dwellings into regular private dwellings and occupied marginal dwellings. Regular private dwellings are further classified into three major groups: occupied dwellings (occupied by usual residents), dwellings occupied by foreign and/or temporary residents and unoccupied dwellings. Marginal dwellings are classified as occupied by usual residents or by foreign and/or temporary residents. Marginal dwellings that were unoccupied on Census Day are not counted in the housing stock.

Province or Territory

Province and territory refer to the major political units of Canada. From a statistical point of view, province and territory are basic areas for which data are tabulated. Canada is divided into ten provinces and three territories.

Rural Area (RA)

Rural areas include all territory lying outside urban areas. Taken together, urban and rural areas cover all of Canada.

Statistical Area Classification (SAC)

The Statistical Area Classification (SAC) groups census subdivisions according to whether they are a component of a census metropolitan area, a census agglomeration, a census metropolitan area and census agglomeration influenced zone (strong MIZ, moderate MIZ, weak MIZ or no MIZ), or the territories (Northwest Territories, Yukon Territory and Nunavut). The SAC is used for data dissemination purposes.

Urban Area (UA)

An urban area has a minimum population concentration of 1,000 persons and a population density of at least 400 persons per square kilometre, based on the current census population count. All territory outside urban areas is classified as rural. Taken together, urban and rural areas cover all of Canada.

Urban Core, Urban Fringe and Rural Fringe

Urban core, urban fringe and rural fringe distinguish between central and peripheral urban and rural areas within a census metropolitan area (CMA) or census agglomeration (CA).

Urban core is a large urban area around which a CMA or a CA is delineated. The urban core must have a population (based on the previous census) of at least 100,000 persons in the case of a CMA, or between 10,000 and 99,999 persons in the case of a CA.

The urban core of a CA that has been merged with an adjacent CMA or larger CA is called the secondary urban core.

Urban fringe includes all small urban areas (with less than 10,000 population) within a CMA or CA that are not contiguous with the urban core of the CMA or CA.

Rural fringe is all territory within a CMA or CA not classified as an urban core or an urban fringe.

Data Quality

General

The 2001 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware that such error exists, and should have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process, from the preparation of materials through data processing, including the listing of dwellings and the collection of data. Some errors occur at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings or individuals are missed, incorrectly enumerated or counted more than once;

- **non-response errors**, which result when responses cannot be obtained from a certain number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response or simply uses the wrong response box;
- **processing errors**, which can occur at various steps including **coding**, when "write-in" responses are transformed into numerical codes; **data capture**, when responses are transferred from the census questionnaire in an electronic format, by key-entry operators; and **imputation**, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the responses to these questions, when weighted up to represent the whole population, inevitably differ somewhat from the responses which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is, the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error because persons or dwellings have been missed, incorrectly enumerated in the census or counted more than once.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of the misunderstanding of enumeration area (EA) boundaries, or because either they do not look like dwellings or they appear uninhabitable. Persons can be missed when their dwelling is missed or is classified as vacant, or because the respondent misinterprets the instructions on whom to include on the questionnaire. Some individuals may be missed because they have no usual residence and did not spend census night in a dwelling.

Dwellings or persons incorrectly enumerated or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings (incorrectly enumerated), when there is a certain

ambiguity regarding the EA boundaries or when units (for example, rooms) are listed separately instead of being treated as part of one dwelling (double counted). Persons can be counted more than once because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

For the 2001 Census, three studies are used to measure coverage error. In the Dwelling Classification Study, dwellings listed as vacant were revisited to verify that they were vacant on Census Day, and dwellings whose households were listed as non-respondent were revisited to determine the number of usual residents and their characteristics. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. The census counts may also have been adjusted for dwellings whose households were classified as non-respondent. Despite these adjustments, the final counts are still subject to some undercoverage. Undercoverage tends to be higher for certain segments of the population, such as young adults (especially young adult males) and recent immigrants. The Reverse Record Check Study is used to measure the residual undercoverage for Canada, and each province and territory. The Overcoverage Study is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire was dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but no response is provided to certain questions. Effort is devoted to ensure as complete a questionnaire as possible. Census representatives edit the questionnaires and follow up on missing information. Their work is then checked by a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses are still missing, i.e. **non-response errors**. Although missing responses are eliminated during processing by replacing each one of them by the corresponding response for a "similar" record, there remain some potential imputation errors. This is particularly serious if the non-respondents differ in some respects from the respondents; this procedure will then introduce a **non-response bias**.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. The respondent may also have entered the answer in the wrong place on the questionnaire. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative who completed certain parts of the questionnaire, such as the structural type of dwelling, or who followed up to obtain a missing response.

Some of the census questions require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur when the written response is ambiguous, incomplete, difficult to read or when the code list is extensive (e.g. major field of study, place of work). A formal Quality Control (QC) operation is used to detect, rectify and reduce coding errors. Within each work unit, a sample of responses is independently coded a second time. The resolution of discrepancies between the first and second codings determines whether recoding of the work unit is necessary. Except for the Industry and Occupation variables, much of the census coding is now automated, resulting in a reduction of coding errors.

The information on the questionnaires is typed into a computer file. Two procedures are used to control the number of **data capture errors**. First, certain edits (such as range checks) are performed as the data are keyed in. Second, a sample from each batch of documents is retyped and compared with the original entries. Unsatisfactory work is identified and corrected, and the remainder of the batch is captured as needed.

Once captured, the data are edited where they undergo a series of computer checks to identify missing or inconsistent responses. These are replaced during the imputation stage of processing where either a response consistent with the other respondents' data is inferred or a response from a similar donor is substituted. Imputation ensures a complete database where the data correspond to the census counts and facilitate multivariate analyses. Although **errors** may have been introduced during **imputation**, the methods used have been rigorously tested to minimize systematic errors.

Various studies are being carried out to evaluate the quality of the responses obtained in the 2001 Census. For each question, non-response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response errors and other types of errors. Also, tabulations from the 2001 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micro-match studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue and place of birth), the responses obtained in the 2001 Census, for a sample of individuals, are being compared with those for the same individuals in the 1996 Census.

For further information on the quality of census data, contact the Social Survey Methods Division at Statistics Canada, Ottawa, Ontario, Canada K1A 0T6, or by calling (613) 951-4783.

Special Notes

Temporary Residents

Unlike previous censuses, the Temporary Resident Study was not carried out in 1996 and 2001. Therefore, the census did not verify, on a sample basis, if temporary residents (persons found on Census Day at a place other than their usual place of residence) were enumerated at their usual place of residence. In the 1991 Census, the number of people included as a result of the Temporary Resident Study was as follows:

Province/ territory	Estimated total	Standard error
Canada	92,584	2,307
Newfoundland	2,621	344
Prince Edward Island	323	64
Nova Scotia	3,683	517
New Brunswick	2,459	344
Quebec	16,462	985
Ontario	30,920	1,379
Manitoba	4,098	412
Saskatchewan	4,808	452
Alberta	11,092	829
British Columbia	15,330	943
Yukon Territory	345	89
Northwest Territories	443	96

Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements in the 2001 Census, enumeration was not permitted or was interrupted before it could be completed. Moreover, for some Indian reserves and Indian settlements, the quality of the enumeration was considered inadequate. These geographic areas (a total of 30) are called incompletely enumerated Indian reserves and Indian settlements.

Data for 2001 are therefore not available for the incompletely enumerated reserves and settlements, and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g. percentage change) between 1996 and 2001 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of incompletely enumerated Indian reserves and Indian settlements, along with population counts from the last two censuses (where available) has been compiled, and is shown in Appendix 1.

A list of incompletely enumerated Indian reserves and Indian settlements is shown in Appendix 2, together with the province, census division and, where applicable, the census metropolitan area or census agglomeration (CMA/CA) in which each is located.

Non-permanent Residents

In 1991, 1996 and 2001, the Census of Population enumerated both permanent and non-permanent residents of Canada. Non-permanent residents are persons who held a student or employment authorization, Minister's permit, or who were refugee claimants, at the time of the census. Family members living with these persons are also classified as non-permanent residents.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this occurred in 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a significant segment of the population, especially in several census metropolitan areas. Their presence can affect the demand for such government services as health care, schooling, employment programs and language training. The inclusion of non-permanent residents in the census facilitates

comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, this inclusion of non-permanent residents brings Canadian practice closer to the UN recommendation that long-term residents (persons living in a country for one year or longer) be enumerated in the census.

According to the 1991 Census, there were 223,410 non-permanent residents in Canada, representing slightly less than 1% of the total population. There were fewer non-permanent residents in Canada at the time of the 1996 Census: 166,715 non-permanent residents, or 0.6% of the total population in 1996.

Total population counts, as well as counts for all variables, are affected by this change in the census universe. Users should be especially careful when comparing data from 1991, 1996 or 2001 with data from previous censuses in geographic areas where there is a concentration of non-permanent residents. Such areas include the major metropolitan areas in Ontario, Quebec and British Columbia.

Although every attempt has been made to enumerate non-permanent residents, factors such as language difficulties and the reluctance to complete a government form – or to understand the need to participate – may have affected the enumeration of this population. Non-permanent residents can only be identified through the long questionnaire completed by 20 percent of Canadian households. The 2001 Census estimate of non-permanent residents will not be known until the release of the immigration data in January 2003.

Adjustment of population counts

Statistics Canada is taking additional measures to protect the privacy of all Canadians and the confidentiality of the data they provide to us. Starting with the 2001 Census, some population counts are adjusted in order to ensure confidentiality.

Counts of the total population are rounded to a base of 5 for any block having a population of less than 15. Population counts for all standard geographic areas above the block level are derived by summing the adjusted block counts. The adjustment of block counts is controlled to ensure that the population counts for dissemination areas will always be within 5 of the actual values. The adjustment has no impact on the population counts of census divisions and large census subdivisions. Dwelling counts are unadjusted.

Population and Dwelling Count Amendments

After the release of the population and dwelling counts, errors are occasionally uncovered in the data. It is not possible to make changes to the 2001 Census data presented in these tables. Users can, however, obtain the population and dwelling count amendments listed by census subdivisions and other levels of geography by visiting the 2001 Census portion of the Statistics Canada Web site at www.statcan.ca. In addition, users can contact the nearest Statistics Canada regional reference centre by telephone at 1 800 263-1136 or by e-mail at infostats@statcan.ca.

Regional Reference Centres

The Advisory Services Division of Statistics Canada provides an information dissemination network across the country through eight regional reference centres. Each reference centre has a collection of current publications and reference documents that can be consulted or purchased, along with diskettes, CD-ROMs, maps, and other products. Copying facilities for printed materials are available on site.

Each reference centre provides a wide range of additional services. On the one hand, the Dissemination Services: a free telephone enquiries line for the most recent basic data. On the other hand, Advisory Services: identification of your needs, establishing sources or availability of data, consolidation and integration of data coming from different sources and development of profiles, analysis of highlights or tendencies and, finally, training on products, services, Statistics Canada concepts and also the use of statistical data.

For more information, you can call the reference centre closest to you by dialling the number below or if you are outside the local calling area, please dial the national toll-free enquiries number and you will be in contact with the Regional Reference Centre serving your area.

Additional References and Services

In addition to being available through regional reference centres and depository libraries, Statistics Canada products may be ordered through your local bookstore or subscription agent. Contact the nearest regional reference centre for a list of Canadian outlets available or visit the Statistics Canada Web site **www.statcan.ca**.

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any regional reference centre or from the **Statistics Canada Web site**.

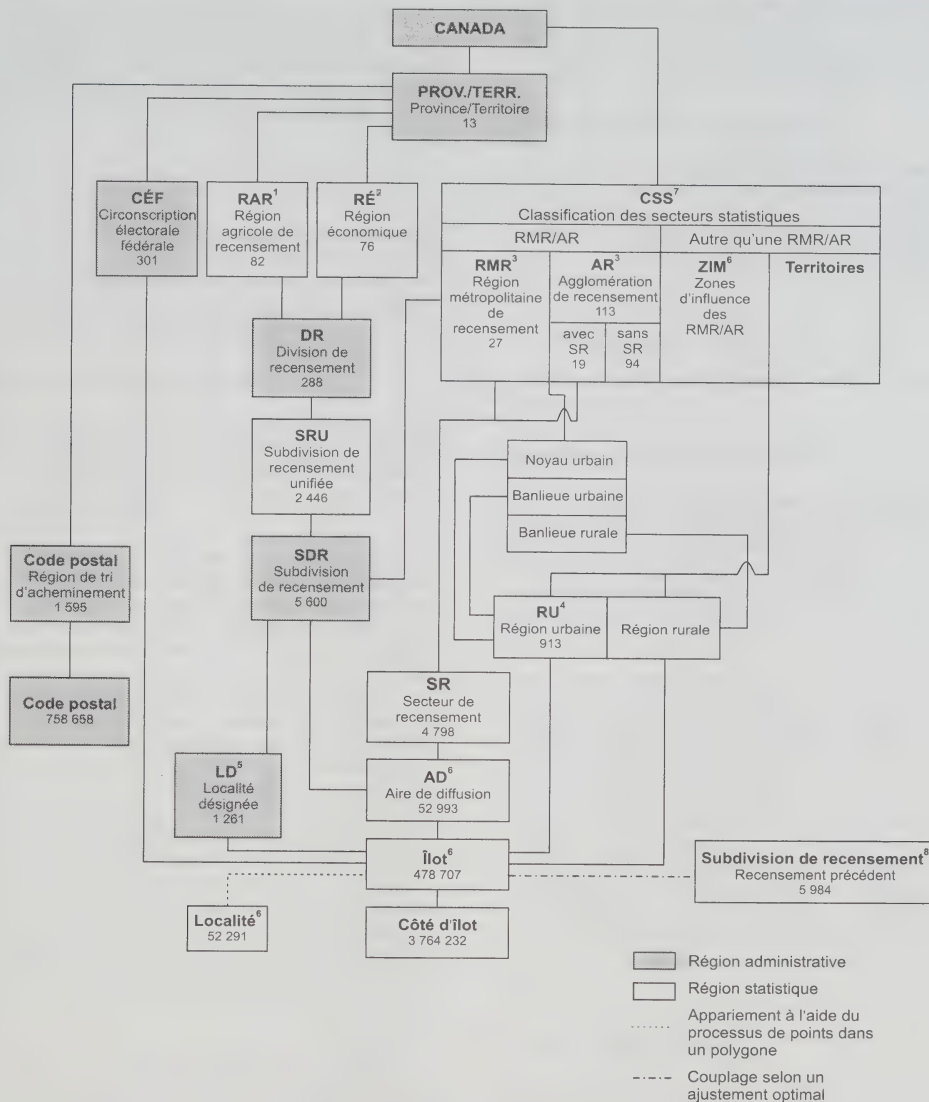

Statistics Canada provides digital geographic products that allow computer manipulation of geographic data. A customised retrieval service is also available for users who wish to define their own geographic areas. A complete description of available digital files and services is provided in the Statistics Canada Online Catalogue on the **Web site**. Contact your nearest regional reference centre for further information on custom services.

Information concerning Census of Agriculture products and services may be found in the Agriculture Division's publication, *People, Products and Services*, Catalogue Nos. 21F0003GPB or 21F0003GIE. For additional information, please call 1 800 465-1991 or visit the **Statistics Canada Web site**.

Users with special data requirements can request post-census services. Data are made available in a variety of formats and media. For additional information, please contact the nearest regional reference centre or visit the **Statistics Canada Web site**.

CANSIM II, Statistics Canada's comprehensive database, provides users with access to current and historical statistics through an easy-to-use interface on our Web site, regional reference centres and a network of private-sector distributors. For more information about CANSIM II, visit the **Statistics Canada Web site** or contact any regional reference centre.

Hierarchie des unités géographiques normalisées pour la diffusion, recensement de 2001

¹ Les régions agricoles de recensement de la Saskatchewan sont formées de subdivisions de recensement unifiées.

² Les régions économiques de l'Ontario sont formées de municipalités (subdivisions de recensement).

³ Une RMR et quatre AR chevauchent les limites provinciales.

⁴ Cinq RU chevauchent les limites provinciales.

⁵ Les localités désignées ne couvrent pas la superficie totale des SDR. Quatre-vingt-deux LD chevauchent les limites des SDR; 13 d'entre elles chevauchent aussi les limites des DR.

⁶ Les zones d'influence des régions métropolitaines de recensement et des agglomérations de recensement (ZIM), les aires de diffusion, les îlots et les localités sont de nouveaux concepts pour le recensement de 2001.

⁷ La Classification des secteurs statistiques (CSS) est une nouvelle classification qui attribue chacune des SDR selon qu'elle fasse partie d'une RMR, d'une AR, d'une zone d'influence des régions métropolitaines de recensement et des agglomérations de recensement (ZIM) ou des territoires à l'extérieur des AR de Whitehorse et de Yellowknife.

⁸ Pour le recensement de 2001 seulement, un couplage selon un ajustement optimal est établi entre les SDR de 1996 et les îlots de 2001 pour faciliter l'extraction de données historiques.

Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le Dictionnaire du recensement de 2001 (nos 92-378-XIF ou 92-378-XPX au catalogue) pour les définitions complètes et des observations additionnelles pertinentes.

Aire de diffusion (AD)

L'aire de diffusion (AD) est une petite unité géographique relativement stable formée d'un ou de plusieurs îlots. Il s'agit de la plus petite région géographique normalisée pour laquelle toutes les données du recensement sont diffusées. Les AD couvrent tout le territoire du Canada.

Circonscription électorale fédérale (CÉF)

Une circonscription électorale fédérale est une région représentée par un député à la Chambre des communes. Les limites des circonscriptions électorales fédérales utilisées pour le recensement de 2001 sont fondées sur l'Ordonnance de représentation de 1996.

Après la diffusion des chiffres de population de chaque recensement décennal, le directeur général des élections détermine le nombre de sièges à la Chambre des communes et publie cette information dans la Gazette du Canada. Les commissions de délimitation des circonscriptions électorales déterminent ensuite les modifications à apporter aux limites des circonscriptions. À la lumière des rapports de ces commissions, le directeur général des élections prépare une ordonnance de représentation (OR) faisant état des limites, du nom et de la population de chaque circonscription électorale fédérale (CÉF). L'ordonnance de représentation prend effet à la première dissolution du Parlement qui se produit au moins un an après sa proclamation. L'Ordonnance de représentation de 1996 (proclamée le 8 janvier 1996) était fondée sur les chiffres de population du recensement de 1991; le nombre de CÉF, établi à 295 selon l'Ordonnance de représentation de 1987, est passé à 301. (Seulement 31 des CÉF décrites dans l'OR de 1996 avaient les mêmes limites que les CÉF décrites dans l'OR de 1987.) Le nom des CÉF peut être modifié n'importe quand par une loi fédérale.

Les limites et les noms des CÉF utilisés pour le recensement de 2001 correspondent aux limites et aux noms déterminés le 1er janvier 2001 (date de référence géographique pour le recensement du Canada de 2001).

Classification des secteurs statistiques (CSS)

La Classification des secteurs statistiques (CSS) regroupe les subdivisions de recensement selon qu'elles font partie d'une région métropolitaine de recensement, d'une agglomération de recensement, d'une zone d'influence des

régions métropolitaines de recensement et des agglomérations de recensement (ZIM forte, ZIM modérée, ZIM faible ou ZIM sans influence) ou des territoires (Territoires du Nord-Ouest, Territoire du Yukon et Nunavut). La CSS est utilisée aux fins de la diffusion des données.

Date de référence géographique

La date de référence géographique est la date fixée par Statistique Canada aux fins du parachèvement du cadre géographique dans lequel les données du recensement seront recueillies, totalisées et diffusées. Pour le recensement de 2001, la date de référence géographique est le 1er janvier 2001.

Densité de la population

La densité de la population est le nombre de personnes au kilomètre carré.

Division de recensement (DR)

Division de recensement (DR) est le terme général de régions créées en vertu des lois provinciales (comme les comtés, les municipalités régionales de comté et les districts régionaux) ou d'autres genres de régions. Les divisions de recensement sont des régions géographiques intermédiaires entre la municipalité (subdivision de recensement) et la province.

Les divisions de recensement ont été établies en vertu de lois provinciales afin de faciliter la planification régionale et la prestation de services qui peuvent être fournis avec plus d'efficacité à une plus grande échelle que la municipalité. Les lois provinciales ou territoriales de Terre-Neuve-et-Labrador, du Manitoba, de la Saskatchewan, de l'Alberta, du Territoire du Yukon, des Territoires du Nord-Ouest et du Nunavut ne prévoient pas la création de ces régions géographiques administratives. C'est pourquoi les divisions de recensement ont été établies par Statistique Canada en collaboration avec ces provinces et territoires, pour la diffusion des données statistiques. Au Territoire du Yukon, la division de recensement correspond à l'ensemble du territoire.

Localité désignée (LD)

Une localité désignée est habituellement une petite collectivité ou un établissement qui ne satisfait pas aux critères établis par Statistique Canada pour être considéré comme une subdivision de recensement (une municipalité) ou une région urbaine.

Les localités désignées sont établies par les provinces et les territoires en collaboration avec Statistique Canada en vue de fournir des données pour les régions inframunicipales.

Genre de localité désignée

DPL	Designated Place
CFA	Class IV Area
LSD	Local Service District
MDI	Municipalité dissoute
DMU	Dissolved Municipality

SE	Aboriginal Settlement

Logement privé

Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor, un hall, un vestibule ou un escalier commun à l'intérieur. L'entrée doit donner accès au logement sans que l'on ait à passer par les pièces d'habitation de quelqu'un d'autre. Le logement doit répondre aux deux conditions qui le rendent propre à l'habitation durant toute l'année :

a) avoir une source de chauffage ou d'énergie (comme en atteste la présence d'une cheminée, de fils électriques, de tuyaux ou compteurs pour l'huile [mazout] ou le gaz, d'une génératrice, de bois de chauffage, d'ampoules électriques, d'une thermopompe, de panneaux solaires, etc.);

b) fournir un espace clos permettant de s'abriter des intempéries (comme en atteste la présence de murs d'enceinte et d'un toit ainsi que de portes et fenêtres offrant une protection contre le vent, la pluie et la neige).

Pour les besoins du recensement, on classe les logements privés comme logements privés ordinaires et logements marginaux occupés. Les logements privés ordinaires se subdivisent en trois grandes catégories : les logements occupés (par des résidents habituels), les logements occupés par des résidents étrangers et/ou temporaires et les logements inoccupés. Les logements marginaux sont classés comme logements occupés par des résidents habituels ou comme logements occupés par des résidents étrangers et/ou temporaires. Les logements marginaux inoccupés le jour du recensement ne font pas partie du parc immobilier.

Noyau urbain, banlieue urbaine et banlieue rurale

Les concepts de noyau urbain, banlieue urbaine et banlieue rurale permettent de faire la distinction entre les régions urbaines centrales et périphériques et les régions rurales à l'intérieur d'une région métropolitaine de recensement (RMR) et d'une agglomération de recensement (AR).

Le noyau urbain est une grande région urbaine autour de laquelle les limites d'une RMR ou d'une AR sont définies. La population du noyau urbain (d'après les chiffres du recensement précédent) doit s'élever à au moins 100 000 habitants dans le cas d'une RMR ou se situer entre 10 000 et 99 999 habitants dans le cas d'une AR.

Le noyau urbain d'une AR qui a été fusionnée à une RMR adjacente ou à une plus grande AR est appelé noyau urbain secondaire.

La banlieue urbaine comprend toutes les petites régions urbaines (ayant une population de moins de 10 000 habitants) à l'intérieur d'une RMR ou d'une AR qui ne sont pas contiguës au noyau urbain de la RMR ou de l'AR.

La banlieue rurale est le territoire au sein d'une RMR ou d'une AR qui n'est pas considéré comme le noyau urbain ni comme la banlieue urbaine.

Province ou territoire

Les termes « province » et « territoire » désignent les principales unités politiques du Canada. Du point de vue statistique, les provinces et les territoires sont des régions de base selon lesquelles les données du recensement sont totalisées et recoupées. Le Canada est divisé en dix provinces et trois territoires.

Région métropolitaine de recensement (RMR) et Agglomération de recensement (AR)

Une région métropolitaine de recensement (RMR) ou une agglomération de recensement (AR) est formée d'une ou de plusieurs municipalités adjacentes situées autour d'une grande région urbaine (appelée noyau urbain). Un noyau urbain doit compter au moins 10 000 habitants pour former une agglomération de recensement et au moins 100 000 habitants pour former une région métropolitaine de recensement. Pour être incluses dans une RMR ou une AR, les autres municipalités adjacentes doivent avoir un degré d'intégration élevé avec la région urbaine centrale, lequel est déterminé par le pourcentage de navetteurs établi d'après les données du recensement sur le lieu de travail.

Si la population du noyau urbain d'une AR devient inférieure à 10 000 habitants, l'AR est retirée du programme. Cependant, une RMR restera une RMR même si la population de son noyau urbain devient inférieure à

100 000 habitants. Les régions urbaines comprises dans une RMR ou une AR qui ne sont pas contiguës à un noyau urbain sont appelées banlieues urbaines, tandis que les régions rurales sont appelées banlieues rurales.

Lorsque le noyau urbain d'une AR compte au moins 50 000 habitants d'après les chiffres du recensement, il est subdivisé en secteurs de recensement. Les secteurs de recensement de l'AR sont maintenus même si, ultérieurement, la population de son noyau urbain devient inférieure à 50 000 habitants. Toutes les RMR sont subdivisées en secteurs de recensement.

Région rurale (RR)

Les régions rurales comprennent tout le territoire situé à l'extérieur des régions urbaines. Ensemble, les régions urbaines et les régions rurales couvrent tout le territoire canadien.

Région urbaine (RU)

Une région urbaine a une concentration démographique d'au moins 1 000 habitants et une densité de population d'au moins 400 habitants au kilomètre carré, d'après les chiffres de population du recensement actuel. Tout territoire situé à l'extérieur des régions urbaines est considéré comme région rurale. Ensemble, les régions urbaines et rurales représentent toute la superficie du Canada.

Subdivision de recensement (SDR)

Subdivision de recensement (SDR) est un terme générique qui désigne les municipalités (telles que définies par les lois provinciales) ou les territoires considérés comme étant des équivalents municipaux à des fins statistiques (par exemple, les réserves indiennes, les établissements indiens et les territoires non organisés).

Genre de subdivision de recensement

Les subdivisions de recensement (SDR) sont classées en 46 genres, selon les appellations officielles adoptées par les autorités provinciales ou fédérales. Il y a toutefois deux exceptions, soit la Subdivision of Unorganized à Terre-Neuve-et-Labrador et la Subdivision of County Municipality en Nouvelle-Écosse, qui constituent des régions géographiques équivalant aux municipalités et qui ont été créées par Statistique Canada et ces provinces pour la diffusion de données statistiques.

Afin de mieux distinguer les SDR les unes des autres, le nom de chaque subdivision de recensement est généralement accompagné d'une indication du genre de subdivision de recensement.

Superficie des terres

La superficie des terres correspond à la surface en kilomètres carrés des parties des terres des régions géographiques normalisées.

Les données sur les superficies des terres ne sont pas officielles et servent uniquement à calculer la densité de la population.

Les superficies des terres sont calculées d'après les limites des régions géographiques du recensement en vigueur le 1er janvier 2001 (date de référence géographique pour le recensement du Canada de 2001). Les données sont disponibles pour toutes les régions géographiques normalisées.

Les données sont tirées de la Base géographique nationale (BGN), qui comprend des couches de polygones représentant les plans d'eau. La projection conique conforme de Lambert de la BGN est transformée en projection conique équivalente d'Albers, étant donné que la notion d'équivalence est indispensable pour calculer la superficie des terres. Des paramètres de projection distincts (deux parallèles de référence, un méridien central et la latitude du point d'origine de la projection) sont utilisés pour chaque province et territoire, ce qui permet d'obtenir des données plus exactes. Les superficies des terres sont calculées avec le SIG Arc/Info®. Les superficies sont calculées en kilomètres carrés au niveau de l'ilot et les données sont stockées, puis agrégées au niveau des unités géographiques supérieures.

Les utilisateurs doivent savoir que, même si les limites des régions géographiques normalisées n'ont pas changé entre les recensements de 1996 et de 2001, les superficies des terres sont différentes parce que la méthode de calcul utilisée a été modifiée. En 1996, la superficie des terres a été calculée manuellement à l'aide d'un planimètre, tandis qu'en 2001,

elle a été calculée de façon automatisée à l'aide d'un logiciel à partir de la nouvelle Base géographique nationale.

Zones d'influence des régions métropolitaines de recensement et des agglomérations de recensement (ZIM)

Le concept de zones d'influence des régions métropolitaines de recensement et des agglomérations de recensement (ZIM) permet de différencier géographiquement les régions du Canada situées à l'extérieur des régions métropolitaines de recensement (RMR) et des agglomérations de recensement (AR). Les subdivisions de recensement situées à l'extérieur des RMR et des AR sont classées dans l'une des quatre catégories établies selon le degré d'influence (forte, modérée, faible ou sans influence) que les RMR et/ou les AR exercent sur elles.

Les subdivisions de recensement (SDR) sont classées dans l'une des catégories de ZIM en fonction du pourcentage de résidents membres de la population active occupée dont le lieu de travail est situé dans le noyau urbain des RMR ou AR. Les SDR sur lesquelles le même degré d'influence est exercé ont tendance à être regroupées. Elles forment des zones autour des RMR et des AR et sont classées dans les différentes catégories (de ZIM forte à ZIM sans influence) à mesure que la distance qui les séparent des RMR et des AR augmente.

Le concept de ZIM est un nouveau concept appliqué aux SDR situées à l'extérieur des RMR et des AR à des fins d'analyse statistique. Auparavant, toutes les SDR du Canada étaient considérées comme faisant partie d'une RMR ou d'une AR ou n'en faisant pas partie (à l'extérieur des RMR et des AR). Les ZIM fournissent aux utilisateurs des renseignements beaucoup plus détaillés sur l'identité géographique des SDR situées à l'extérieur des RMR et des AR. Comme dans le cas des RMR et des AR, le classement d'une SDR dans l'une des catégories de ZIM a été déterminé en fonction du pourcentage de navetteurs de la population active occupée établi d'après les données sur le lieu de travail du recensement de 1991.

La méthode de calcul du pourcentage de navetteurs pour les ZIM diffère légèrement de la méthode utilisée pour déterminer si une SDR doit être incluse ou non dans une RMR ou une AR. Les pourcentages de membres de la population active occupée qui résident dans une SDR particulière située à l'extérieur des RMR/AR et qui travaillent dans le noyau urbain de n'importe quelle RMR/AR sont combinés pour déterminer le degré d'influence qu'une ou plusieurs RMR/AR exercent sur cette SDR, de la façon suivante :

1. La catégorie de ZIM forte comprend les SDR dont la proportion de navetteurs est de 30 % ou plus (au moins 30 % de la population active occupée totale qui demeure dans la SDR travaille dans un noyau urbain quelconque d'une RMR/AR).

2. La catégorie ZIM modérée comprend les SDR dont la proportion de navetteurs se situe entre 5 % et 30 % (au moins 5 % mais moins de 30 % de la population active occupée totale qui demeure dans la municipalité travaille dans un noyau urbain quelconque d'une RMR/AR).
3. La catégorie ZIM faible comprend les SDR dont la proportion de navetteurs est supérieure à 0 % mais inférieure à 5 % (plus de 0 % mais moins de 5 % de la population active occupée totale qui demeure dans la municipalité travaille dans un noyau urbain quelconque d'une RMR/AR).
4. La catégorie ZIM sans influence comprend les SDR dont la population active comprend moins de 40 personnes (où les règles de suppression de données sont appliquées) ou ne comprend aucune personne faisant la navette pour aller travailler dans un noyau urbain d'une RMR/AR).

Il faudra faire preuve de discernement pour appliquer, s'il y a lieu, le concept de ZIM au Nunavut, dans les Territoires du Nord-Ouest et au Territoire du Yukon. En effet, de nombreuses SDR comprises dans ces territoires sont très grandes et peu peuplées, de sorte que le rapport entre le lieu de travail et la population, autour duquel s'articule le concept de ZIM, est instable.

Qualité des données

Généralités

Le recensement de 2001 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect de normes élevées au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Les utilisateurs des données du recensement doivent savoir que ces erreurs existent et doivent avoir une idée générale de leurs principales composantes afin d'être en mesure de déterminer l'utilité des données produites et d'évaluer les risques qu'ils courent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent par hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important. Dans le cas d'erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de façon plus systématique et introduire un « biais » dans les estimations. Comme ce biais persiste

quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreurs sont les suivants :

- les **erreurs de couverture** qui se produisent lorsqu'on oublie des logements ou des personnes, qu'on les dénombre à tort ou qu'on les compte plus d'une fois;
- les **erreurs dues à la non-réponse** qui surviennent lorsqu'on n'a pu obtenir de réponses d'un certain nombre de ménages ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les **erreurs de réponse** qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse ou s'est tout simplement trompé de case de réponse;
- les **erreurs de traitement** qui peuvent se produire à diverses étapes, notamment lors du **codage**, lorsque les réponses en lettres sont converties en codes numériques; lors de la **saisie des données**, lorsque les préposés à l'entrée des données transfèrent dans un format électronique les réponses figurant au questionnaire du recensement; lors de l'**imputation**, lorsqu'une réponse « valide », mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou « invalide » (« valide » et « invalide » renvoient à la cohérence de la réponse, compte tenu des autres renseignements compris dans l'enregistrement);
- les **erreurs d'échantillonnage** qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages. Ces erreurs résultent du fait que les réponses à ces questions supplémentaires, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des réponses qu'on aurait obtenues si l'on avait posé ces questions à tous les ménages.

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille

des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été prises pour corriger certaines erreurs identifiables, les chiffres définitifs sont toujours entachés d'une certaine erreur parce que des personnes ou des logements ont été oubliés, dénombrés à tort ou comptés plus d'une fois.

L'oubli de logements ou de personnes se traduit par un **sous-dénombrement**. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), parce qu'ils n'ont pas l'apparence de logements ou parce qu'ils semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé, ou parce que le répondant a mal interprété les instructions concernant les personnes à inclure sur le questionnaire. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un **surdénombrement**. Il peut y avoir surdénombrement de logements lorsque des constructions impropres à l'habitation sont classées comme logements (dénombrement à tort), lorsqu'il existe une certaine ambiguïté au sujet des limites des SD ou lorsque des unités d'habitation (par exemple, des chambres) sont comptées séparément plutôt que d'être considérées comme faisant partie d'un seul logement (double compte). Les personnes peuvent être comptées plus d'une fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers de la population du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

Pour le recensement de 2001, trois études permettent de mesurer l'erreur de couverture. Dans le contexte de l'Étude sur la classification des logements, on a de nouveau visité des logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le jour du recensement, et des logements dont le ménage a été classé comme non répondant afin de déterminer le nombre de résidents habituels et leurs caractéristiques. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement avait été classé par erreur comme inoccupé. Il est aussi possible que les chiffres du recensement aient été corrigés pour tenir compte des logements dont le ménage a été classé comme non répondant. En dépit de ces ajustements, les chiffres définitifs peuvent tout de même être entachés d'un certain sous-dénombrement. Le sous-dénombrement tend à être plus élevé pour certains segments de la population

comme les jeunes adultes (plus particulièrement ceux de sexe masculin) et les personnes récemment immigrées. L'Étude de la contre-vérification des dossiers permet de mesurer le sous-dénombrement résiduel pour le Canada, de même que pour chaque province et chaque territoire. L'Étude sur le surdénombrement a pour objet d'étudier les erreurs de surdénombrement. Ensemble, les résultats de l'Étude de la contre-vérification des dossiers et de l'Étude sur le surdénombrement fournissent une estimation du sous-dénombrement net.

Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, d'autres erreurs influent sur les caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire y a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y ait des questions laissées sans réponse. Des efforts sont déployés afin d'obtenir un questionnaire le plus complet possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de l'information manquante. Le travail du recenseur est ensuite vérifié par un surveillant et par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte, c'est-à-dire d'**erreurs dues à la non-réponse**. Bien que les réponses manquantes soient éliminées en cours de traitement en remplaçant chacune d'elles par la réponse correspondante figurant dans un enregistrement « similaire », il est possible que certaines erreurs d'imputation s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des répondants sous certains aspects; en effet, cette procédure introduit un **biais dû à la non-réponse**.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Il est aussi possible que le répondant ait inscrit sa réponse au mauvais endroit sur le questionnaire. Ces erreurs sont désignées sous le nom d'**erreurs de réponse**. Bien que ces erreurs surviennent d'ordinaire parce que les répondants ont fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs qui ont rempli certaines parties du questionnaire, comme le type de construction résidentielle, ou qui ont effectué le suivi pour obtenir une réponse manquante.

Certaines questions du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des **erreurs de codage** se produisent lorsque la réponse écrite est ambiguë, incomplète ou difficile à lire, ou lorsque la liste des codes est longue (p. ex. principal domaine d'études, lieu de travail). L'étape formelle du contrôle qualitatif (CQ) permet de cerner et de rectifier les erreurs de codage et d'en réduire le nombre. À l'intérieur de chaque unité de travail, un échantillon des réponses est codé indépendamment une deuxième fois. La résolution des incohérences entre les premier et deuxième codages détermine la nécessité, s'il y a lieu, de coder à nouveau l'unité de travail. Exception faite pour le codage des variables de l'industrie et de la profession, la plupart des tâches de codage du recensement sont maintenant automatisées, ce qui a pour conséquence de réduire le nombre d'erreurs de codage.

Les renseignements figurant dans les questionnaires sont tapés dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'**erreurs à la saisie des données**. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on tape de nouveau à l'ordinateur un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Le travail non satisfaisant est ainsi circonscrit et corrigé et, si cela est nécessaire, le reste du lot est de nouveau saisi.

Une fois saisies, les données font l'objet de vérifications qui consistent à les soumettre à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. À l'étape de l'imputation, on substitue à ces dernières des réponses déduites à partir des autres données de l'enregistrement ou des réponses tirées d'un enregistrement donneur similaire. L'imputation permet d'obtenir une base de données complète dont les données correspondent aux chiffres du recensement et facilitent les analyses multidimensionnelles. Même si des **erreurs** peuvent être introduites à l'**étape de l'imputation**, les méthodes utilisées ont fait l'objet de tests rigoureux visant à réduire au minimum les erreurs systématiques.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 2001. Ainsi, on a calculé les taux de non-réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel d'erreurs dues à la non-réponse et d'autres types d'erreurs. De même, les totalisations établies à partir des données du recensement de 2001 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques « stables » (comme l'âge, le sexe, la langue maternelle et le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 2001 aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1996.

Pour obtenir de plus amples renseignements sur la qualité des données du recensement, veuillez communiquer avec la Division des méthodes d'enquêtes sociales, Statistique Canada, Ottawa (Ontario), Canada K1A 0T6, ou en composant le (613) 951-4783.

Notes spéciales

Résidents temporaires

Contrairement aux recensements précédents, l'Étude sur les résidents temporaires n'a pas été réalisée en 1996 et en 2001. Par conséquent, on n'a pas vérifié (à l'aide d'un échantillon) si les résidents temporaires (personnes qui se trouvaient ailleurs qu'à leur domicile habituel le jour du recensement) ont été dénombrés à leur domicile habituel. Au recensement de 1991, le nombre de personnes incluses par suite de l'Étude sur les résidents temporaires se répartissait comme suit :

Province/ territoire	Total estimatif	Erreur type
Canada	92 584	2 307
Terre-Neuve	2 621	344
Île-du-Prince-Édouard	323	64
Nouvelle-Écosse	3 683	517
Nouveau-Brunswick	2 459	344
Québec	16 462	985
Ontario	30 920	1 379
Manitoba	4 098	412
Saskatchewan	4 808	452
Alberta	11 092	829
Colombie-Britannique	15 330	943
Territoire du Yukon	345	89
Territoires du Nord-Ouest	443	96

Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 2001, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a été interrompu avant d'être mené à terme. De plus, la qualité du dénombrement pour certaines réserves indiennes et établissements indiens a été jugée insuffisante. Ces régions géographiques (au nombre de 30) sont appelées réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 2001 ne sont donc pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota à cet effet. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex. des variations en pourcentage) entre 1996 et 2001 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement), mais peut être important pour les régions plus petites où les réserves indiennes et les établissements indiens en cause représentent une plus grande proportion de la population.

Une liste des réserves indiennes et établissements indiens partiellement dénombrés ainsi que les chiffres de la population des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'Annexe 1.

Une liste des réserves indiennes et des établissements indiens partiellement dénombrés figure à l'Annexe 2. On a indiqué pour chacun la province, la division de recensement et, le cas échéant, la région métropolitaine de recensement ou l'agglomération de recensement (RMR/AR).

Résidents non permanents

En 1991, 1996 et en 2001, le Recensement de la population a dénombré à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents étaient titulaires d'un permis de séjour pour étudiants, d'un permis de travail ou d'un permis ministériel, ou qui revendiquait le statut de réfugié, ainsi que les membres de la famille qui vivaient avec eux au moment du recensement.

Avant 1991, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment important de la population, en particulier dans plusieurs régions métropolitaines de recensement. Leur présence peut influencer sur la demande de services gouvernementaux tels que les soins de santé, l'éducation,

les programmes d'emploi et la formation linguistique. L'inclusion des résidents non permanents au recensement facilite la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, l'inclusion des résidents non permanents permet au Canada de mieux refléter la recommandation de l'ONU, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés au recensement.

Selon les résultats du recensement de 1991, il y avait 223 410 résidents non permanents au Canada, ce qui représente un peu moins de 1 % de la population totale. Le nombre avait diminué au recensement de 1996 : 166 715 résidents non permanents, soit 0,6 % de la population totale en 1996.

Le total des chiffres de population, de même que ceux de toutes les variables, sont touchés par ce changement apporté à l'univers du recensement. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991, de 1996 ou de 2001 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de recensement de l'Ontario, du Québec et de la Colombie-Britannique.

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent avoir influé sur le dénombrement de cette population. Les résidents non permanents ne peuvent être identifiés qu'au moyen du questionnaire complet, qui est rempli par 20 pour cent des ménages canadiens. L'estimation du nombre de résidents non permanents au recensement de 2001 ne pourra être obtenue avant la publication en janvier 2003 des données relatives à l'immigration.

Ajustement des chiffres de population

Statistique Canada prend des mesures supplémentaires afin de protéger la vie privée de tous les Canadiens et la confidentialité des données qu'ils fournissent. À compter du recensement de 2001, certains chiffres de population sont ajustés afin d'assurer la confidentialité des données.

Dans le cas des îlots dont la population est inférieure à 15 habitants, les chiffres de population totale sont arrondis à un multiple de 5. Les chiffres de population de toutes les régions géographiques normalisées de niveau supérieur à celui de l'îlot sont calculés en additionnant les chiffres ajustés des îlots. Toutefois, l'ajustement des chiffres des îlots est contrôlé de sorte que les chiffres de population des aires de diffusion se situent toujours à plus ou moins 5 de la valeur réelle. L'ajustement n'aura pas d'incidence sur les chiffres de population des divisions de recensement et des grandes subdivisions de recensement. Les chiffres des logements ne sont pas ajustés.

Modifications aux chiffres de population et des logements

Suite à la diffusion des chiffres de population et des logements, des erreurs sont occasionnellement relevées dans les données. Il est impossible d'apporter des changements aux données du recensement de 2001 qui sont présentées dans ces tableaux. Toutefois, les utilisateurs peuvent obtenir les modifications aux chiffres de population et des logements touchant les subdivisions de recensement et d'autres niveaux géographiques en visitant la section consacrée au recensement de 2001 dans le site Web de Statistique Canada. Ils peuvent également communiquer avec le centre régional de consultation de Statistique Canada le plus près au numéro 1 800 263-1136 ou par courriel à infostats@statcan.ca.

Centres régionaux de consultation

La Division des services consultatifs de Statistique Canada vous offre un réseau de diffusion de l'information qui couvre tout le Canada au moyen de huit centres régionaux de consultation. Chaque centre de consultation possède une série de publications courantes et des documents de référence qui peuvent être consultés ou achetés, de même que des disquettes, des CD-ROM, des cartes et d'autres produits. On peut photocopier sur place les documents imprimés.

Chaque centre de consultation vous offre un vaste éventail de services additionnels. D'une part, les services de diffusion : service téléphonique de renseignements gratuit pour les données de base les plus récentes. D'autre part, les services consultatifs : identification de vos besoins, détermination des sources ou de la disponibilité des données, consolidation et intégration de données provenant de diverses sources et élaboration de profils, analyse de faits saillants ou de tendances et pour terminer, formation sur les produits, services et concepts de Statistique Canada ainsi que l'utilisation de données statistiques.

Vous pouvez communiquer avec le centre de consultation le plus près de chez vous en composant le numéro indiqué plus bas ou encore le numéro sans frais si vous êtes à l'extérieur de la zone de communication locale de ce centre; votre appel sera acheminé au centre de consultation qui dessert votre région.

Numéro sans frais pour les
demandes de renseignements
(Canada et les États-Unis) :
1 800 263-1136

ATS : 1 800 363-7629

Numéro sans frais **pour commander
seulement** (Canada et les États-
Unis) : 1 800 267-6677

Numéro sans frais **pour commander
par télécopieur** (Canada et les
États-Unis) : 1 877 287-4369

Région de l'atlantique

Couvre les provinces suivantes :
Terre-Neuve et le Labrador, la
Nouvelle-Écosse, l'Île-du-Prince-
Édouard et le Nouveau-Brunswick.

Services consultatifs
Statistique Canada
2^e étage, boîte 11
1741, rue Brunswick
Halifax (Nouvelle-Écosse)
B3J 3X8

Téléphone : (902) 426-5331 ou, sans
frais, 1 800 263-1136
Télécopieur : (902) 426-9538
Courriel : atlantic.info@statcan.ca

Région du Québec

Couvre tout le Québec et le Nunavut
sauf la région de la Capitale
nationale.

Services consultatifs
Statistique Canada
Complexe Guy-Favreau, tour Est,
4^e étage
200, boulevard René-Lévesque
Ouest
Montréal (Québec)
H2Z 1X4

Téléphone : (514) 283-5725 ou, sans
frais, 1 800 263-1136
Télécopieur : (514) 283-9350
Courriel : infostcmontreal@statcan.ca

Région de la Capitale nationale

Couvre la région de la Capitale
nationale.

Centre de consultation statistique
(région de la Capitale nationale)
Statistique Canada
Immeuble R.-H.-Coats,
rez-de-chaussée
120, avenue Parkdale
Ottawa (Ontario)
K1A 0T6

Téléphone : (613) 951-8116 ou, sans
frais, 1 800 263-1136
Télécopieur : (613) 951-0581
Courriel : infostats@statcan.ca

Région de l'Ontario

Couvre tout l'Ontario sauf la région
de la Capitale nationale.

Services consultatifs
Statistique Canada
Immeuble Arthur-Meighen, 10^e étage
25, avenue St. Clair Est
Toronto (Ontario)
M4T 1M4

Courriel : toronto.info@statcan.ca

Région des prairies

Il y a trois centres de consultation
dans cette région qui couvre le
Manitoba, la Saskatchewan, l'Alberta
et les Territoires du Nord-Ouest.

Pour le Manitoba :

Services consultatifs
Statistique Canada
Immeuble Via Rail, bureau 200
123, rue Main
Winnipeg (Manitoba)
R3C 4V9

Téléphone : (204) 983-4020 ou, sans
frais, 1 800 263-1136
Télécopieur : (204) 983-7543
Courriel : prairies.info@statcan.ca

Région des prairies – fin

Pour la Saskatchewan :

Services consultatifs
Statistique Canada
Immeuble Park Plaza, bureau 440
2365, rue Albert
Regina (Saskatchewan)
S4P 4K1

Téléphone : (306) 780-5405 ou, sans
frais, 1 800 263-1136
Télécopieur : (306) 780-5403
Courriel : prairies.info@statcan.ca

Pour l'Alberta et les Territoires du
Nord-Ouest :

Services consultatifs
Statistique Canada
Immeuble Pacific Plaza, bureau 900
10909, avenue Jasper Nord-Ouest
Edmonton (Alberta)
T5J 4J3

Téléphone : (780) 495-3027 ou, sans
frais, 1 800 263-1136

Références et services supplémentaires

Vous pouvez vous procurer les produits de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt ou vous pouvez également les commander chez votre libraire ou votre agent d'abonnement. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près ou visitez le site Web de Statistique Canada www.statcan.ca.

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et les adresses des distributeurs autorisés dans un centre régional de consultation ou sur le **site Web de Statistique Canada**.

Statistique Canada offre des produits géographiques numériques qui permettent la manipulation informatique des données géographiques. Un service personnalisé d'extraction des données est aussi disponible et permet aux utilisateurs de délimiter les régions géographiques de leur choix. Une description complète des fichiers numériques et des services disponibles se trouve dans le catalogue électronique de Statistique Canada sur le **site Web**. Veuillez communiquer avec le centre régional de consultation le plus près pour obtenir des précisions supplémentaires sur les services personnalisés.

On peut obtenir des renseignements sur les produits et services du Recensement de l'agriculture en consultant la publication de la Division de l'agriculture, *Répertoire des produits, des services et des personnes-ressources*, nos 21F0003GPB ou 21F0003GIF. Pour obtenir de plus amples renseignements, veuillez composer le numéro sans frais 1 800 465-1991 ou visiter le **site Web de Statistique Canada**.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les services postcensitaires. Les données sont disponibles dans une variété de supports et de formats. Pour de plus amples renseignements, veuillez communiquer avec le centre régional de consultation le plus près ou visitez le **site Web de Statistique Canada**.

La base de données CANSIM II de Statistique Canada permet aux utilisateurs d'accéder aux statistiques actuelles et historiques grâce à une interface facile à consulter sur notre site Web, aux centres régionaux de consultation et au réseau de distributeurs du secteur privé. Pour de plus amples renseignements sur CANSIM II, vous pouvez visiter le **site Web de Statistique Canada** ou communiquer avec un des centres régionaux de consultation.

Symbols, Endnotes and Abbreviations

Symbols

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- 0 Nil or zero.
- 0 Amount too small to be expressed.
- A Adjusted figure due to boundary change. For further information, see the "Content Considerations", page 6.
- † Excludes census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes", page 347.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes", page 347.

Endnotes

- (1) The dwelling counts refer to total private dwellings in Canada, including dwellings occupied by their usual residents, and/or occupied by temporary or foreign residents as well as private dwellings that are unoccupied. The census dwelling counts do not include collective dwellings, which are dwellings of a commercial, institutional or communal nature. The usual residents counted in collective dwellings are, however, included in the population counts.
- (2) There are 1,261 designated places (DPLs) for the 2001 Census. There are 602 census subdivisions that contain DPLs or parts of DPLs (82 DPLs straddle two or more census subdivisions). For DPLs that contain parts, the number of parts is displayed beside the DPL name (e.g. part of 2).
- (3) For the first time, urban areas are defined using population counts and population density data from the current census, instead of from the previous census.

Signes conventionnels, notes de fin de document et abréviations

Signes conventionnels

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- 0 Néant ou zéro.
- 0 Nombres infimes.
- A Chiffre ajusté à cause de changement de limite. Pour plus de renseignements, voir les « Considérations relatives au contenu » à la page 6.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir les « Notes spéciales » à la page 366.
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir les « Notes spéciales » à la page 366.

Notes de fin de document

- (1) Les chiffres des logements correspondent à l'ensemble des logements privés au Canada, y compris les logements occupés par les résidents habituels, et/ou occupés par des résidents temporaires ou étrangers, de même que les logements privés inoccupés. Les chiffres des logements du recensement ne comprennent pas les logements collectifs, qui sont des établissements commerciaux, institutionnels ou communautaires. Les résidents habituels dénombrés dans des logements collectifs sont toutefois inclus dans les chiffres de population.
- (2) Au recensement de 2001, on comptait 1 261 localités désignées (LD). Au total, 602 subdivisions de recensement comprennent des LD ou des parties de LD (82 LD chevauchent les limites de deux subdivisions de recensement ou plus). Dans le cas de LD qui contiennent des parties, le nombre de parties est indiqué à côté du nom de la LD (p. ex. partie de 2).
- (3) Pour la première fois, les régions urbaines sont définies à partir des chiffres de population et des données sur la densité de la population du recensement courant plutôt que du recensement précédent.

FEDERAL ELECTORAL DISTRICTS - 1996
 THE ELECTORAL DISTRICTS ACT
 S.C. 1985, c. 1
 AS AMENDED
 1996-1997, c. 1

LEGISLATION

LEGISLATION

Note: An asterisk (*) indicates a change in the name of the electoral district subsequent to the 1996 Representation Order.

Les sources utilisées pour la préparation de cette étude comprennent les Recensements statistiques Canada (Bibliothèque de Géographie, Centre canadien de la recherche et de l'analyse) Canada (Division de la Statistique).

Remarque: Un astérisque (*) indique que le nom de la circonscription a changé après le Décret de représentation électorale de 1999.

Exploring Census Data

Découvrir les données du recensement

Do you have
questions about
how to find
census data for
your community
or province?

**Statistics Canada
has the answers...**

GeoSearch — makes it easy to find any city, town or village in Canada, see it on a map, and get basic population numbers for that place.

Community Profiles — provides a statistical profile of Canada's cities, towns, villages, aboriginal communities, counties and metropolitan areas.

GeoSuite — a CD-ROM tool that allows users to explore census geography and to determine geographic codes, names, and population and dwelling counts.

Avez-vous des
questions sur la façon
de trouver des données
du recensement sur
votre communauté ou
votre province?

**Statistique Canada
a la réponse...**

GéoRecherche — permet de trouver facilement toutes les villes et tous les villages du Canada, de les voir sur une carte et d'obtenir des données de base sur leur population.

Profils des communautés — propose un profil statistique des villes, des villages, des communautés autochtones, des comtés et des régions métropolitaines du Canada.

GéoSuite — CD-ROM qui permet d'explorer la géographie du recensement et de trouver les codes et les noms géographiques de même que les chiffres de population et des logements.
